河马云web接口文档

版本: 1.1.7

杭州龙境科技有限公司

目录

```
    LongeneClient

    Function: createAppPlayer([mountPoint][, options])

    Class: AppPlayer

    o Property: state
    o Property: muted
    o Property: volume
    o Property: orientation
    Function: open([parameters])

    Function: close()

    Function: destroy()
    Function: updateInterface()
    Function: setMuted([value])
    Function: setVolume([value])
    Function: setOrientation([value])
    Event: 'error'
    Event: 'statechange'
    Event: 'mutedchange'
    Event: 'volumechange'
    Event: 'orientationchange'

    Class: LoggingControl

    Function: getLogLevel()
    Function: setLogLevel([value])

    Function: addLogListener([callback])

    Function: removeLogListener([callback])
```

LongeneClient

河马云的JS库, 用于在Web端显示河马云手机

```
<div id="mountPoint"></div>
<script src="http://h5.longene.com.cn/static/js/longene-client-1.1.7.js">
</script>
<script>
    // 在挂载点为mountPoint的div下创建云手机
    var player = LongeneClient.createAppPlayer('mountPoint');
    // 启动云端应用
    player.open({ ip, domain, port, token });
</script>
```

Function: createAppPlayer([mountPoint][, options])

- mountPoint (String or HTMLElement) DOM挂载点(required)
- options (Object) 配置选项
- Returns 成功返回 AppPlayer , 失败返回 null

创建一个云手机的实例

```
// 通过div的id名创建云手机
var player = LongeneClient.createAppPlayer('mountPoint');
// 通过div的dom对象创建云手机
var player = LongeneClient.createAppPlayer(document.getElementById('mountPoint'));
if (!player) {
   console.log('AppPlayer创建失败!');
}
```

可配置选项列表

选项名字	描述	默认值
muted	静音属性,值为 boolean	false
volume	音量属性, 值为 (0 - 1) 的 float 值	1
keyboard	键盘开关,值为 boolean	false
mediaType	媒体类型,值为 [auto, video, image] 的 string 值	auto
orientation	定位方向,值为 [landscape, portrait] 的 string 值	0

设置云手机的音量和静音属性

```
// 创建初始为静音的云手机
var player = LongeneClient.createAppPlayer('mountPoint', {
    muted: ture
});
// 创建初始为50%音量的云手机
var player = LongeneClient.createAppPlayer('mountPoint', {
    volume: 0.5
});
```

设置云手机的支持键盘输入的开关

```
var player = LongeneClient.createAppPlayer('mountPoint', {
    keyboard: true
});
```

设置云手机的媒体类型

云手机的媒体类型有两种 video 和 image , auto 为自动匹配,在浏览器支持的情况下优先选择 video 类型。

video 类型的云手机通过视频标签 video 进行播放,图像清晰,画面流畅,效果较好。

image 类型的云手机通过图像标签 canvas 进行播放,图像较为模糊,且不支持声音的播放。

```
// 自动匹配类型
var player = LongeneClient.createAppPlayer('mountPoint', {
    mediaType: 'auto'
});
// 创建video类型的云手机,不成功返回null
var player = LongeneClient.createAppPlayer('mountPoint', {
    mediaType: 'video'
});
// 创建image类型的云手机,不成功返回null
var player = LongeneClient.createAppPlayer('mountPoint', {
    mediaType: 'image'
});
```

设置云手机的定位方向, landscape 表示横屏播放, portrait 表示竖屏播放。

```
// 设置初始为横屏的云手机
var player = LongeneClient.createAppPlayer('mountPoint', {
   orientation: 'landscape'
});
// 设置初始为竖屏的云手机
var player = LongeneClient.createAppPlayer('mountPoint', {
   orientation: 'portrait'
});
```

Class: AppPlayer

由 createAppPlayer() 返回的实例

Property: state

• (String) 获取云手机的播放状态,只读属性

状态类型描述

名字	描述
new	空闲状态
connecting	正在连接服务
connected	连接成功
playing	开始播放
closed	关闭状态

```
var state = player.state;
if (state === 'connecting') {
   console.log('正在连接中, 请稍后...');
}
if (state === 'playing') {
   console.log('应用已启动');
}
if (state === 'closed') {
   console.log('应用已关闭');
}
```

Property: muted

• (Boolean) 获取或设置云手机的静音状态, 读写属性

```
var muted = player.muted;
if (muted) {
  console.log('当前静音');
  // 关闭静音
  player.muted = false;
}
```

Property: volume

• (Float) 获取或设置云手机的音量大小, 读写属性

```
var volume = player.volume;
console.log('当前音量为: ' + volume);
// 设置音量到80%
player.volume = 0.8;
```

Property: orientation

• (Number) 获取或设置云手机的定位方向, 读写属性

```
var orientation = player.orientation;
if (orientation === 'landscape') {
   console.log('当前处于横屏');
   // 改变定位方向为竖屏
   player.orientation = 'portrait';
}
```

Function: open([parameters])

parameters (Object) 启动参数
 ip (String) 由河马云返回的云服务IP地址或域名(required)
 domain (String) 由河马云返回的云服务域名(required)
 port (Number) 由河马云返回的连接端口(required)

o token (String) 由河马云返回的验证字段(required)

启动云手机, parameters 为云手机的调用参数

```
var player = LongeneClient.createAppPlayer('mountPoint');
player.open({
   ip: 'lcloud.longene.com.cn',
     domain: 'lcloud.longene.com.cn',
   port: 20000,
   token: '123456'
});
```

Function: close()

关闭云手机的显示

```
// 连接云手机的界面
player.open(parameters);
// 关闭云手机的界面
player.close();
// 再次连接
player.open(parameters);
```

Function: destroy()

销毁创建的云手机实例

```
// 创建云手机实例
var player = LongeneClient.createAppPlayer('mountPoint');
// 连接云手机
player.open(parameters);
// 销毁云手机实例
```

```
player.destroy();
player = null;
```

Function: updateInterface()

在挂载点 mountPoint 的宽高发生变化,更新云手机的用户界面,适应新的宽高

```
<div id="mountPoint" style="height: 200px;width: 200px;"></div>
<script>
  var player = LongeneClient.createAppPlayer('mountPoint');
  // 改变挂载点的宽高
  document.getElementById("mountPoint").style.height = '800px';
  document.getElementById("mountPoint").style.widht = '800px';
  // 更新player的宽高
  player.updateInterface();
  // 在回调函数里更新player的宽高
  window.onresize = function() {
    player.updateInterface();
  }
  </script>
```

Function: setMuted([value])

• value (Boolean) (required)

设置云手机的静音状态

```
player.setMuted(true);
player.on('mutedchange', function() {
   if (player.muted) {
     console.log('静音开启');
   }
});
```

Function: setVolume([value])

• value (Float) (required)

设置云手机的音量大小

```
player.setVolume(0.55);
player.on('volumechange', function() {
   var volume = Math.round(player.volume * 100)
   console.log('当前音量为: ' + volume + '%');
});
```

Function: setOrientation([value])

• value (Number) (required)

设置云手机的定位方向

```
<div id="mountPoint"></div>
<script>
  var player = LongeneClient.createAppPlayer('mountPoint', {
    orientation: 'landscape'
  });
  // 改变player的定位方向
  player.setOrientation('portrait');
  // 在回调函数里更新player的定位方向
  window.addEventListener("orientationchange", function() {
    if (window.orientation === 0 || window.orientation === 180) {
        // 竖屏时
        player.setOrientation('portrait');
    } else {
        // 横屏时
        player.setOrientation('landscape');
    }
    });
    </script>
```

Event: 'error'

- error (Object)
 - code (Number) 错误代号
 - o message (String) 错误信息

云手机的错误事件

code	message
1000	连接超时或服务出错
1002	ICE协商出错
1007	远端连接断开
1008	SDP协商出错
1015	参数不正确
1026	服务无响应
1027	验证失败
1029	发生未知错误

```
player.on('error', function(error) {
    console.log('发生错误: ' + error.code + ' ' + error.message);
});
```

Event: 'statechange'

云手机状态属性 state 发生改变时的事件

```
player.on('statechange', function() {
    console.log('状态发生改变: ' + player.state);
});
```

Event: 'mutedchange'

云手机静音属性 muted 发生改变时的事件

```
player.on('mutedchange', function() {
   if (player.muted) {
      console.log('静音开启');
   } else {
      console.log('静音关闭');
   }
});
```

Event: 'volumechange'

云手机音量属性 volume 发生改变时的事件

```
player.on('volumechange', function() {
    console.log('音量发生改变: ' + player.volume);
});
```

Event: 'orientationchange'

云手机定位属性 orientation 发生改变时的事件

```
player.on('orientationchange', function() {
    if (player.orientation === 'landscape') {
        console.log('横屏');
    } else if (player.orientation === 'portrait') {
```

```
console.log('竖屏');
}
});
```

Class: LoggingControl

全局的日志控制对象

```
共有5个等级 [verbose, debug, info, warn, error] 依次递升如果日志等级为 info, 则类型为 info warn error 的日志都会输出到控制台默认全局日志等级为 warn
```

Function: LoggingControl.getLogLevel()

• **Returns** [verbose, debug, info, warn, error]

获取当前的日志等级

```
var level = LongeneClient.LoggingControl.getLogLevel();
console.log('当前日志等级为: ' + level);
```

Function: LoggingControl.setLogLevel([value])

• value (String) [verbose, debug, info, warn, error]

设置当前的日志等级

```
// 设置日志等级为info
LongeneClient.LoggingControl.setLogLevel('info');
```

Function: LoggingControl.addLogListener([callback])

- callback (Function) 回调函数
 - o type (String) 日志的类型 [verbose, debug, info, warn, error]
 - o message (String) 日志的信息

日志默认是输入到控制台 console, 在打不开控制台的时候调用该接口,添加回调函数监听日志输出

```
LongeneClient.LoggingControl.addLogListener(function(type, message) {
   if (type === 'error') {
      console.log('错误: ' + message);
   }
```

```
if (type === 'warn') {
    console.log('警告: ' + message);
}
if (type === 'info') {
    console.log('信息: ' + message);
}
});
```

Function: LoggingControl.removeLogListener([callback])

• callback (Function) 回调函数

将监听日志的回调函数移除

```
``js
function logListener(type, message) {
console.log('日志: ' + message);
}
// 增加监听器
LongeneClient.LoggingControl.addLogListener(logListener);;
// 移除监听器
LongeneClient.LoggingControl.removeLogListener(logListener);;
```
